GSM AUDIO INTERCOM

4000 SERIES GSM PRO AND GSM LITE

GSM PRO

GSM LITE

VIDEX GSM

GSM entry systems employing mobile phone technology to communicate and operate doors, automatic gates and remote site applications.

With GSM comes freedom. Answer calls from your door or gate from any telephone number including your mobile so you never have to miss that important caller. Systems available for single call button applications up to 50 apartments *(GSM PRO only)* all with the facility to divert to additional numbers if the first is busy or unanswered.

Programming is carried out via SMS messaging *(also via micro USB connection on the GSM PRO)*. Both the GSM PRO and LITE include an exit button input, auxiliary inputs and outputs, dry contact relay and can be powered using 12-24V ac/dc.

In addition the GSM PRO includes an integrated proximity access feature *(for up to 1000 users)* and call progress is announced both verbally and with four call progress LED's.

An event log is maintained within the entry panel and can be integrated via the USB port and the bespoke PC software includes many features to simplify the installation and programming process.
