WIEG-BOARD

The WIEG-BOARD is a mini controller that can connect to any Wiegand output 26-37, 56, 58 bits proximity reader or keypad. It can be used for high security systems because if the reader or keypad is removed from the wall entry cannot be gained by shorting or cutting the wires, unlike standalone systems. When a card or PIN that is stored in the controller's memory is registered, the relay will switch, opening the door.

- Input voltage: 12Vdc
- One relay output. Clean or 12Vdc, selectable by jumper.
- 1000 users
- Wiegand 26-44, 56, 58 bits input
