TSLATCH and TSTIMER

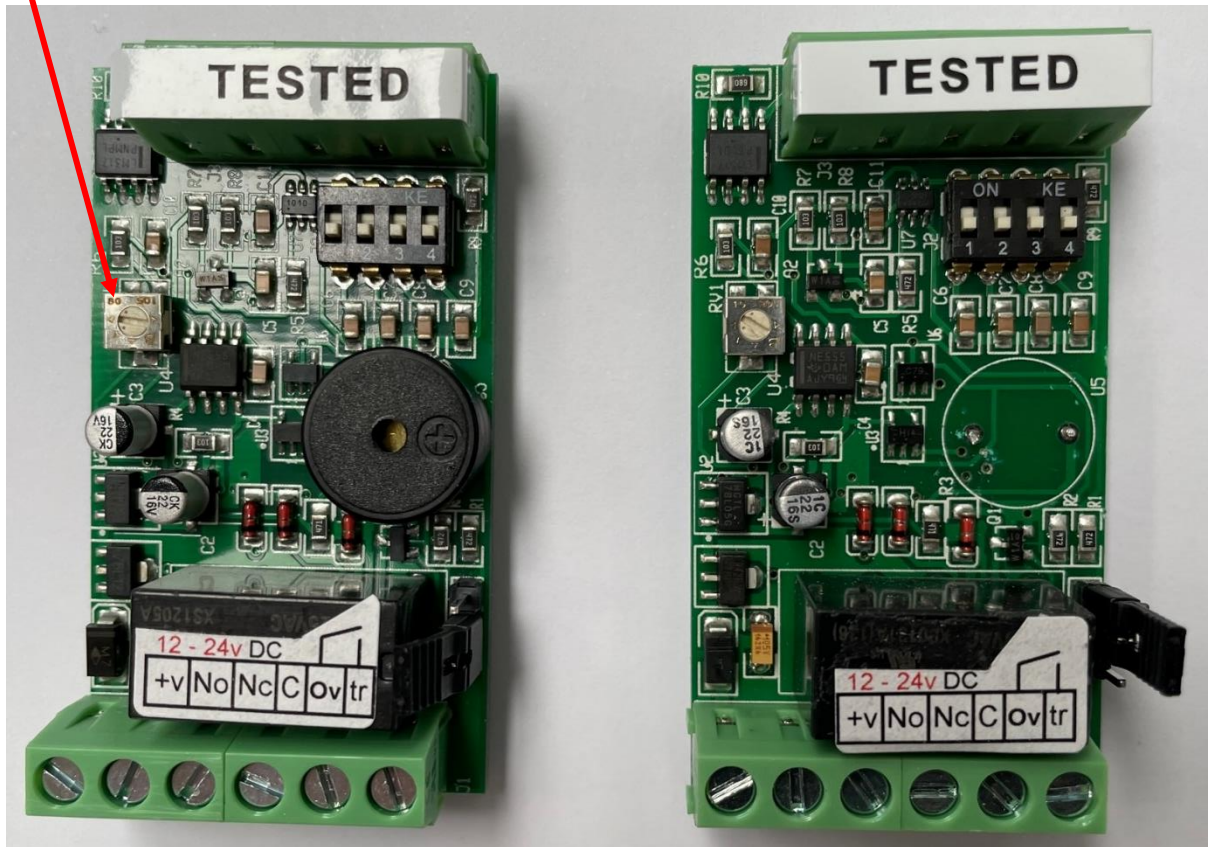

Small latching and timer relays

The terminals are marked on the sticker on the relay as shown below. Supply the relay with 12-24Vdc. Wire the relay output to your equipment as appropriate. There is a normally open 0V trigger to activate the relay. The top row of 5 terminals are not used.

Latching: When triggered the relay will switch, when triggered again the relay will switch back over.

Timer: When triggered the relay will switch for an amount of time which can be adjusted from 0-27 seconds by the potentiometer (anticlockwise to increase time). The sounder can be removed with pliers if not required.

Relay contact rating is 1A @ 125Vac, 2A @ 30Vdc

12-24V+
